Brainstorm

- Start with the end result, and "how did we arrive here"?
- Picking the topic (how we decided to do this one, our fears about having not enough data, ...)
- Picking the right dataset(s) for the job
- How did we decide on the visualizations we did? (three separate brainstorms, and we put everything in common after a week. What you see now is a merge of the three things)
- Prototyping phase (include Kush's drawings, initial website)
- Getting ready: splitting the work (separate D3 components that we would merge together afterwards - talk about index.dev, new website))
- Talk about each D3 component on the website, who made them, what challenges did we have for those, ... (if possible, use pictures/GIFs to explain those! -> Animations are always better than pictures)
- Have a section about main achievements/challenges to recap what we said (basically the conclusion)

Who did what?

(TODO: Change, expand, or delete this sentence) We decided to split the work in independent tasks as early as we could.
